Syneo Florida Moves To New Facility

West Palm Beach, FL- May 30, 2013 - Syneo, the medical device solutions company, has moved its Florida manufacturing facility to a new West Palm Beach location.

The move was due to the growth of the company and a rapidly expanding customer base.

“Four years ago, we doubled our space and had more than enough room to meet our manufacturing needs. Today, those needs have changed. The growth of our company has led us out of, what had become, a very cramped space and into a large, purpose-built facility. We now have dedicated areas for the development of new technologies that will further position Syneo as the leader in automation for medical device manufacturing,” said Daniel Woodward, CEO and CTO of Syneo.

The new facility, which is located across the street from the previous location, is 20,000 square feet and includes a laser development lab, a product demonstration room and 10,000 square feet of assembly area.
